EDUCATION

International Institute of Information Technology (IIIT) Bhubaneswar

Bachelor of Technology in Computer Science Engineering

(CGPA: 8.55 | Year: 2026 – Present (2nd Year))

Renaissance School, Bulandshahr, U.P.

Senior Secondary (PCM) – 96%

Matriculation – 93.8%

PROJECTS

Get Me a Chai — Full-stack Web Application

- Developed a Next.js-based crowdfunding platform.
- Implemented secure payment integration with Razorpay.
- Designed user authentication and dynamic database interactions .

WhatsApp Chat Analyzer | Python, Pandas, Streamlit

- Built a Python-based tool to analyze WhatsApp chat data and extract insights such as message statistics, emoji usage, and user activity trends.
- Parsed raw .txt files into structured data and performed visualization with Matplotlib and Seaborn.
- Deployed an interactive Streamlit interface to allow users to upload chat logs and view analytics dashboards.

Car Price Predictor | Python, Machine Learning, Flask

- Developed an end-to-end machine learning web application to predict used car prices based on features like brand, model, year, fuel type, and kilometers driven.
- Performed data cleaning, preprocessing, and feature encoding to prepare data for model training.
- Integrated the ML model with a Flask backend and built a responsive frontend using HTML, CSS, and JavaScript.

Movie Recommender System | Python, Machine Learning

- Developed a movie recommendation system in Python that provides personalized movie suggestions based on user ratings and preferences using collaborative/content filtering techniques.
- Performed data preprocessing and feature extraction on movie datasets to prepare inputs for the recommendation model.
- Implemented recommendation logic using similarity measures or filtering algorithms to return relevant movie suggestions.

SMS Spam Classifier | Python, NLP, Machine Learning

- Developed an SMS Spam Classification machine learning model in Python to distinguish between spam and non-spam (ham) messages.
- Performed text preprocessing including tokenization, stopword removal, and vectorization using techniques like Count Vectorizer / TF-IDF.
- Built an interactive Streamlit web interface to allow users to input messages and get real-time spam/ham predictions.

SKILLS

Languages: C, C++, Python, JavaScript, HTML, CSS

Frameworks: NextJS, React, Tailwind, Flask, Streamlit, Pytorch

Databases: MySQL, MongoDB

Developer Tools: Git and GitHub, VS Code, Google Colab

Machine Learning & Data Science: Machine Learning (Regression, Classification), Deep Learning, Natural Language Processing (NLP), Data Preprocessing, Feature Engineering, Model Evaluation, Data Analysis, Data Visualization

Libraries: NumPy, Pandas, Scikit-learn, Matplotlib, Seaborn

Others: Data Structures & Algorithms(DSA), Object Oriented Programming, Problem Solving, Adaptability, Teamwork, Time Management, Public Speaking

HONORS

LeetCode :Solved 800+ questions on various concepts of data structures and algorithms.

LeetCode : 2000+ rating in Leetcode Contest
